

**Code to replicate empirical application in**

**Kitamura-Stoye “Nonparametric Testing of Random Utility Models”**

RUM\_00\_Main executes the entire application. Parameters can be set within that script, see documentation in code. Please note that the full script will take very long to execute. Individual blocks of years can be extracted using lines 132-133.

Please note that a CVX license is necessary to run the code. A license file must exist in the path referred by RUM\_11\_cvx. Installation of CVX is otherwise automated.
